PROFESSIONAL SUMMARY

Computer Science graduate with hands-on experience building REST APIs, machine learning models, and data-driven applications, alongside proven cross-functional leadership in fast-paced startup environments. Skilled in Python, JavaScript, and SQL, with a track record of owning projects end to end and using data to guide decisions. Seeking Software Development, AI/ML, or Data Analyst roles where strong problem-solving and technical execution can drive measurable impact.

CORE COMPETENCIES

Java | JavaScript | Python | SQL | REST APIs | Node.js | MongoDB | Machine Learning | Data Analysis | Strategy & Operations | Cross-Functional Leadership | Data-Driven Decision Making | Process Improvement | Project Ownership (End-to-End) | Stakeholder Management | Complex Problem Solving | Dashboarding & Reporting | Team Leadership | Fast-Paced Startup Environments

WORK EXPERIENCE

Python Developer Intern **Sept 2023 – Dec 2023**
BlendVidya EdTech

- Developed backend features using Python and MySQL to streamline data processing and automation workflows, improving operational efficiency.
- Designed and shipped an end-to-end train ticket booking automation system, reducing manual effort in the booking process.
- Improved system performance through optimized database queries, debugging, and process refinement.
- Collaborated with a cross-functional development team using Git version control in a fast-paced, iterative environment.

Team Lead **Feb 2025 – Sep 2025**
LearnFlu — early-stage EdTech startup

- Took full ownership of a team driving product adoption for an AI/ML learning program, breaking down complex engagement and growth challenges into actionable, cross-functional tasks.
- Used performance data to justify decisions and prioritize initiatives, earning recognition as Top ATL (May) and Top Team Lead (July).
- Led negotiations and execution that secured a 5-year institutional partnership, demonstrating end-to-end ownership of a high-impact initiative.

Assistant Manager – Operations Intern **Oct 2024 – Feb 2025**
Yavhi (Aarde Projects)

- Managed CRM operations end to end, using data analysis to track leads, customer engagement, and pipeline health.
- Applied Excel and SQL to generate data-driven insights that improved conversion rates and informed operational decisions.
- Built dashboards and maintained data accuracy to support faster, evidence-based decision-making across the team.

KEY PROJECTS

Personal Finance Tracker API (Node.js, Express, MongoDB, JWT)

- Architected 7 RESTful API endpoints across 2 MongoDB data models, with secure JWT-based authentication and bcrypt password hashing.
- Built support for 8 income/expense categories with full CRUD operations, filtering, and ownership-scoped queries to enforce strict data isolation between users.
- Designed a MongoDB aggregation pipeline to compute income, expense, and budget analytics server-side, avoiding costly in-application computation.
- GitHub: github.com/PradeepG01/finance-tracker-api

Credit Risk Prediction Model (Python, Scikit-learn, Pandas)

- Trained and evaluated 2 classification models (Logistic Regression, Random Forest) on 5,000 applicant records to predict loan default risk.
- Achieved 85.3% ROC-AUC and 80% accuracy with the Logistic Regression model, using precision, recall, and F1-score to account for class imbalance.
- Identified the top 3 predictive features (credit score, debt-to-income ratio, income) via Random Forest feature importance analysis.
- GitHub: github.com/PradeepG01/credit-risk-prediction

Transactions Analytics Dashboard (Python, Pandas, Streamlit)

- Built an interactive dashboard analyzing 6,000+ transactions across 799 customers, 8 categories, and 4 payment channels.
- Implemented dynamic filtering and 4 live KPI metrics (volume, transaction count, success rate, average transaction size) to support faster decision-making.
- GitHub: github.com/PradeepG01/fintech-analytics-dashboard

EDUCATION

B.Tech, Computer Science and Engineering — Dayananda Sagar University, Bengaluru2021 – 2025
Pre-University — Deeksha PU College

TECHNICAL SKILLS

- Programming & Data: Python, SQL, JavaScript, Java — used for data analysis, automation, and building data-driven solutions
- Backend & Web: Node.js, Express.js, REST APIs, MongoDB, MySQL, HTML, CSS, React
- Machine Learning & Tools: TensorFlow, Scikit-learn, Pandas, NumPy, Git, GitHub, AWS, Google Cloud
- Core Foundations: Data Structures & Algorithms, OOP, SDLC, Debugging, Structured Problem Solving

LANGUAGES

English, Kannada, Telugu, Hindi
